

Vectren Line A Pipeline Replacement Project

Centerville, Ohio

As a part of Vectren's, a CenterPoint Energy company, commitment to provide customers with safe and reliable gas service, we are required to conduct federally regulated pipeline testing, routine maintenance and replacement/relocation construction.

The project will be completed within the existing 50'-wide right-of-way and the adjacent 20' temporary easements. Vectren's easements grant the right to "operate, maintain, repair, replace and remove" its gas pipeline. This project will require that the entire 50-foot-wide right-of-way be cleared of all obstructions. Therefore, prior to construction, Vectren will be clearing the right-of-way, including the removal of trees, shrubs, decorative or natural landscaping and all structures within the right-of-way. Right-of-way clearing will also include the removal of fencing that is within, on or impeding access to the right-of-way. The fencing will be reinstalled at Vectren's cost after the completion of construction in a similar or better condition than it exists now.

Restoration of the project area will be performed by Vectren's subcontractor after construction work has been completed and will be subject to weather conditions. Vectren will provide a copy of the landowner's easement upon request. While Vectren recognizes that this work can be inconvenient, it is vital for maintaining the integrity of its facilities.

20" Pipeline Replacement

June 2020 to October 2021

Vectren will replace an existing 20" natural gas transmission line between Yankee Street and Wilmington Pike, beginning late June with an estimated completion during the first week of October 2021. Residents and businesses affected by construction will be notified of the work and timeline of the project.
